EXAMINATION SERIES: NOVEMBER 2009

ABSTRACT

The objective of the project was to investigate the incidence Kangundo District hospital to check on the most affected group of the people and probably the type of treatment given to the patients .

The treatment data was based on written prescription and direct contact with Patients who came to buy request for anti-fungal from the hospital pharmacy The research was based on the 158 patients who were diagnosed with ring worm infection in the hospital during my attachment period and it indicted that most affected age group with ring worms of the skin are the youth.

This probably because the youth are frequently in contact with materials that may be carrying fungal infection and also tend to share belonging such as basin , clothing and towels .
