DIPLOMA IN PHARMACEUTICAL TECHNOLOGY**

**OCTOBER/NOVEMBER 2008**

## ABSTRACT

Young people now form the largest generation in the world with almost two billion below the age of 17 years as in statistics given in children's rights and sexuality in the context of HIV/AIDS in Africa, save the children, Sweden. Most young people lack information and services they require to protect themselves against HIV/AIDS. Thus there is a great need to listen to the children and note their needs in order to protect themselves from HIV/AIDS.

That is why the Trade project has focused in management of HIV/AIDS in young people below the age of 17 years. This is initiate antiretroviral treatment so as to improve the quality of the HIV infected, reduce HIV related morbidity and restore or preserve their immune function through maximal suppression of viral replication. At the end there are discussion, conclusion and recommendation to improve management of people living with HIV/AIDS.
