**PRESENTED TO : DEPARTMENT OF HEALTH,
SCIENCE AND BIOTECHNOLOGY
KENYA POLYTECHNIC
UNIVERSITY COLLEGE**

OCTOBER – NOVEMBER 2008

ABSTRACT

The project provides information on Chlamydial infections. Investigations were carried out at Makadara Health Centre and interpretations of the results were analysed respectively. ↓

All the patients that were included in this research were of age 16 – 45 years with inclusion of pregnant women in the maternity wards. 50 patients were included in the study initial but eight of them were excluded later due to lack of compliance. 42 patients who remained participated up to the end of the study.

Bar graphs, tables and pie charts have been used in research analysis and later finds are discussed and summarized in the last chapter.
